

How to make a photo opening with the Art Deckle tool

- 1. Trace** a design or shape with a pencil on back of paper. Poke the point of a scissor through the center of traced image.
- 2. Cut** four or more wedges from the hole to the edges of the pencil outline.
- 3. Tear** out the wedges against the teeth of Art Deckle, sliding the tool edge along the outside of the traced shape.

Shown above is a circle opening using the fine Art Deckle tool. At right is a finished rectangular photo opening, which is also embossed using the straight edge side of the Art Deckle tool.
