Instruction Manual PICTURE FRAMING PROJOINER

Model F300-2

www.logangraphic.com

Description

The Pro Joiner Model F300-2 has been designed as a full featured manual joiner that is easy to use. Features include alignment pins which will correctly drive V-nails into all woods, fully adjustable press for variable moulding sizes and shapes, adjustable V-nail spacing allowing you to drive up to two V-nails at once, convenient V-nail spacing gauge to take the guess work out of placement, easy to load V-nail blocks that slide on a fixed rail and includes a quick set-up clamp to precisely secure moulding. Precise corner joints can be achieved with this heavy duty professional style joiner. Producing professional quality picture frames is now easier than ever.

Identification

V-nails - Moulding fasteners.

Lever - Arbor press handle used to drive clamped moulding on to V-nails.

Lever Adjustment Block - Block which moves to locate pressure foot and adjust lever height.

Moulding Spacer - Helps in driving awkward profile mouldings onto V-nails.

Pressure Foot - Urethane coated foot which locates on moulding joint and drives wood onto nails.

V-nail Slide Cartridge - Allows V-nail blocks to be moved out for easy loading.

V-nail Blocks - Two blocks which hold V-nails.

V-nail Gauge - Allows for "no guessing" set-up of nail spacing.

Vise - Quick set jaw locks moulding in place. Clamp moves up and down to drive wood onto nails.

Parts List

Model F300-2

Assembly Procedure

A. Extension Arms

- 1. Align set of holes in arm with holes in vise, making sure the rubber bumper faces up. (Fig. 1).
- 2. Attach arm to vise with extension arm screws using extension wrench supplied.

Preparation

A. Clamp Moulding

Mark edges of mitre to blend any gaps in joint (Fig. 2). Use wood stain marker available at hardware store.

Glue moulding mitre for long lasting solid corners (Fig. 3).

Always start by placing longer length in vise on right hand side and shorter length on left hand side. This will give you two halves of frame, eliminating errors (Fig. 4).

- 1. Remove V-nail slider.
- 2. Press vise down and tighten vise stop to provide clearance for moulding.
- **3.** Adjust clamp jaw by pressing spring button and sliding handle (Fig. 5).
- 4. Align moulding pieces in vise so top corner is square (Fig. 6).
- 5. Tighten handle only as much as necessary to hold joint together.
- 6. Release vise stop.

Preparation continued

B. Set V-nail Spacing

- 1. Read dimension from vise scale (Fig. 7).
- Adjust <u>V-nail block</u> in <u>slider</u> to same dimension as <u>vise</u> <u>scale</u>. <u>V-nails</u> are now set approximately 1/4 inch from each end of joint (Fig. 8).

3. Replace slider.

V-nail Corner Spacing Stop

- Locate <u>slider</u> against the stop by pushing it back as far as it will go.
- This stop changes the distance the top V-nail is located from the end of the joint (Dimension X) (Fig. 9).

- Only one <u>V-nail block</u> is moveable and it is designed to be removed from the <u>slider</u>.
- When small mouldings need to be joined. Simply remove the <u>stop knob</u> from end of <u>slider</u> and slide <u>V-nail block</u> out. It cannot be left in <u>slider</u> or damage may occur.
- This now allows you to drive two V-nails (one at a time in different places) to have a secure joint.

Model F300-2

Preparation continued

C. Set Pressure Foot Over Moulding

- 1. Loosen lever adjustment block handle.
- 2. Adjust <u>lever adjustment block</u> so <u>pressure foot</u> locates over middle moulding or where even downward pressure can be applied (Fig. 10).
- 3. Tighten lever.
- 4. Due to the many moulding profiles we have included a black moulding spacer. This is especially useful when the outside edge of moulding is considerably thinner than inside (rabbet) edge of moulding. This should help eliminate the joint from opening (Fig. 11)

One nail - the foot should be directly over the nail.

Two nails - the foot should be between the nails.

D. Adjust Foot Height

- With moulding now securely clamped, push the <u>vise</u> down until moulding bottoms out onto <u>V-nail blocks</u> and tighten <u>vise stop</u>.
- 2. Lower lever handle below horizontal.
- **3.** Adjust <u>pressure foot</u> by turning wheel until it contacts moulding and handle is below horizontal (Fig. 12).
- 4. Release vise stop.

E. V-nail Type

- 1. Hardwood nails are used for very hard woods like oak and maple. Do not use these nails on softwoods.
- 2. Softwood nails are used for other woods but can be used on hardwoods. Test them on hardwoods. If they do not work, use a hardwood nail.

F. V-nail Size

1. As a general rule, nail should be at least 1/2 of moulding thickness.

G. V-nail Quantity

1. 2 V-nails - from 0" to 2" (5cm) 3 V-nails - from 2" (5cm) to 3" (7cm)

Instruction Manual

Model F300-2

Operation

A. Load V-nails

- **1.** Remove <u>slider</u> from base board (Fig. 13).
- **2.** Decide to drive one or two V-nails. With some hardwoods (walnut, etc) it may be easier to press only one V-nail in at a time.
- **3.** Insert V-nail with *sharp edge* up onto pins oriented the same as the sticker on the V-nail blocks (Fig. 14).
- Replace <u>slider</u> between guides on <u>baseboard</u> up against <u>corner</u> <u>stop</u> (Fig. 15).

For information on how to purchase additional V-nails see page 10.

B. Press Nails

- **1.** Lower <u>lever</u> and <u>pressure foot</u> onto moulding.
- 2. Press <u>lever</u> completely until <u>vise clamp</u> bottoms on <u>V-nail blocks</u> (Fig. 16).

Making a quick firm pull on the lever drives the V-nails faster and more accurately.

- 3. Raise lever.
- 4. Remove <u>V-nail slider</u>.
- 5. Remove jointed moulding corner.
- 6. Repeat process of clamping a new corner of moulding and loading V-nails.

C. Stacking V-Nails

It is possible to drive V-Nails directly behind the first V-Nail (stacking). This is to make possible, solid corners in extra thick moulding 1 1/2" or more. Care should be taken and it is advisable to practice with scrap moulding first.

- **1.** To start this procedure, press one V-Nail at a time.
- 2. Without moving the V-Nail block from its position in the V-Nail slider, place another V-Nail on the block and replace the slider to its original position.
- 3. Press the V-Nail in using slow but firm action.

Note: With some very hard woods, it may be necessary to place the second V-Nail on the V-Nail block upside down. This is to ensure maximum contact with the first V-Nail and the second one being pushed in underneath the first. It may also not be possible to drive it all the way flush with the moulding, depending on wood used, in which case, it may be necessary to sand or file the V-Nail until it is flush with mould-ing. This should not be done until all 4 corners have been joined.

4. Repeat the process until the corner has been completely joined and then repeat with the remaining three corners.

Trouble Shooting

Problem	Solution
Gaps in joints.	Sand Mitres smooth.
	Make sure the two pairs are equal length.
	Reduce the amount of glue in joint.
	Check square cutting action of saw.
	Use longer V-nails if possible.
V-nails don't drive in all the way in.	Try using one (1) V-nail at a time, especially when joining hard woods.
	Remove any obstruction under vise.
	Re-adjust the depth of the lever arm.
V-nail holders won't emerge from V-nail blocks.	Soak in solvent to clear away glue or dust. Place a finger under V-nail block between block and slider to push V-nail holder up.
Moulding joints open up when pressing V-nails in.	Re-adjust the placement of the pressure foot to spread the load more evenly.
	Use one V-nail at a time when foot contacts awkward sloping profile moulding.

Warranty

Logan Graphic Products, Inc. ("Logan") warrants the Pro Joiner - Model F300-2, to be free from defects in parts and workmanship for a period of one year from the date of original purchase. Logan warrants that it will either repair or replace, at it's sole discretion, any necessary replacement parts found to be defective. Should the product need to be returned to Logan for repair or replacement parts, authorization for any return must come from Logan in writing. Costs of returning the product to Logan, including insurances, shall be borne by the purchaser. Logan shall not be liable for any damages or losses, incidental or consequential, direct or indirect, arising from the use of this product. This warranty extends only to the original purchaser and is not assignable or transferable. This warranty is in lieu of all other warranties, expressed or implied.
